Younger and Older Maternal Age. Maternal age at either end of the reproductive age spectrum (less than 15 years and greater than 35 years) is an independent risk factor for stillbirth. Maternal age greater than or equal to 35 years of age is associated with an increased risk of stillbirth in nulliparous and multiparous women 25 26. A significant proportion of perinatal deaths seen in older women are related to lethal congenital and chromosomal anomalies.

### Management of Stillbirth | ACOG

The American College of Obstetricians & Gynecologists (ACOG) and the Society for Maternal Fetal Medicine (SMFM) have issued new guidelines replacing previous guidance on prenatal genetic screening. The guidelines are restricted to subscribers and members. This post summarizes Practice Bulletin No. 226, offers brief commentary, and invites your thoughts on the new guidelines.

### ACOG-SMFM Issue New Guidelines for Prenatal Genetic

Background. Maternal mortality and severe maternal morbidity, particularly among women of color, have increased in the United States. The Centers for Disease Control and Prevention (CDC) reported that pregnancy-related deaths increased from 7.2 per 100,000 live births in 1987 to 18.0 in 2014 1, and non-Hispanic black women had a 3.3 times greater pregnancy-related mortality ratio compared with ...

### Levels of Maternal Care | ACOG

Intrapartum care for healthy women and babies (CG190) This guideline covers the care of healthy women and their babies, during labour and immediately after the birth. It focuses on women who give birth between 37 and 42 weeks of pregnancy ('term'). The guideline helps women to make an informed choice about where to have their baby.

to increased risks of common complications such as advanced maternal age, fetal abnormalities, and growth restriction. Maternal Age Older Than 35 years Older maternal age is associated with an increased risk of stillbirth in both nulliparous and multiparous women (9, 20).

### ACOG PRACTICE BULLETIN

Advanced Maternal Age, or Pregnancy at Age 35 or Older. People who are pregnant at age 35 or older are often referred to as "advanced maternal age." They may be told that they should have a labor induction or C-section at 39 weeks, solely because of their age.

### Evidence on Advanced Maternal Age—Evidence-Based Birth

Providing information to all patients of childbearing age about the obstetric risks of advanced maternal age can help them make informed decisions about the timing of childbearing. This topic will address the management of pregnancy in women of advanced age, which is generally agreed upon as age 35 years.

### UpToDate

Absolute risk of stillbirth in women of advanced maternal age between 37–41 weeks of gestation in the USA.15 Maternal age Absolute risk of stillbirth at different gestational ages excluding congenital abnormalities (absolute stillbirth risk with additional exclusion of medical diseases)

### Induction of Labour at Term in Older Mothers

Going back to the 1980's, ACOG issued guidelines recommending that women of advanced age be offered prenatal testing for Down syndrome and other aneuploidies. These guidelines remained in place until a new screening technology was recognized in the 2000's.

### ACOG Issues New Prenatal Testing Guidelines—Prenatal

The American College of Obstetricians and Gynecologists (ACOG) has developed guidelines on antepartum fetal surveillance. The goal of antepartum fetal surveillance is to prevent fetal death.

### ACOG Guidelines on Antepartum Fetal Surveillance

Advanced maternal age is defined as age 35 years or above at delivery. Epidemiology/Incidence : About 15% of women giving birth in the US are 35 years or older, and 2.6% are age 40 or older. The risk of stillbirth in women age 35-39 is about 11-14/1,000 births and is 11-21/1,000 births in women 40 years and older.

### Advanced maternal age and the risk of SMFM.org

Maternal age of 35 years should not be used as a cutoff for offering diagnostic testing. The decision to offer screening or invasive testing should not be based on age alone but should take into...

### ACOG Releases Guidelines on Screening for Fetal

Women who give birth at a very advanced maternal age (48 years+) are at higher risk of pregnancy complications, however most can Impact of socioeconomic position and maternal morbidity in Australia The risk of severe maternal morbidity amongst women in Australia is increased by lower socioeconomic position, suggests a new study

### Search Results—RCOG

SUMMARY OF ACOG GUIDELINES FOR PERINATAL CARE gestational age. ? 27-36 weeks ?Tdap should be administered during each pregnancy, irrespective of patient's prior history of receiving. Optimal timing is between 27 and 36 weeks gestation to maximize maternal antibody response and passive antibody transfer levels in the newborn.

### Summary of ACOG Guidelines for Perinatal Care

Article Metrics INTRODUCTION: To determine if induction of labor among women ? 40 years for advanced maternal age (AMA) at 39 0'7–39 6'7 weeks is associated with an increased risk of cesarean section compared to women who are expectantly managed.

### The Association of Labor Induction for Advanced Maternal

Women at risk of preeclampsia are defined based on the presence of one or more high-risk factors (history of preeclampsia, multifetal gestation, renal disease, autoimmune disease, type 1 or type 2 diabetes, and chronic hypertension) or more than one of several moderate-risk factors (first pregnancy, maternal age of 35 years or older, a body mass index greater than 30, family history of preeclampsia, sociodemographic characteristics, and personal history factors).

### ACOG Committee Opinion No. 743: Low-Dose Aspirin Use
