Opponent Process Theory. This color theory was proposed by Ewald Hering. The Opponent Process Theory states that there are color receptors present in the visual system that respond to the three pairs of colors in an opposite manner, thus the name of the theory. These 3 color pairs include black-white, blue-yellow, and red-green.

Vision: Color Theories - Explorable.com

At that time, color theory was based on RYB primary colors, which defined red, yellow, and blue as the colors capable of mixing all hues. This is the scheme most commonly taught

The psychological, additive and subtractive primaries of modern colour theory. In line with Hering's widely accepted opponent model, modern colour theory recognizes four psychological primaries, the three historical primaries plus green, arranged in two opposing pairs, yellow/blue and red/green (Fig. 11.2.3A).

The Dimensions of Colour, modern colour theory

Color training in the arts today is deeply divided between modern and "traditional" color theory. Modern color theory characteristically emphasizes concepts of color space, especially the framework of hue, value and chroma devised by the artist and art teacher Albert Munsell. Additionally, modern color theory incorporates the discoveries by which Helmholtz, Maxwell and Hering revolutionized our fundamental understanding of the nature of color as radically as Darwin transformed our ...
