The biological molecules are divided into four major categories; carbohydrates, lipids, proteins, and nucleic acids. All these biological molecules are formed as a result of chemical associations or linkages between different atoms.

~~Types of Bonds in Biological Molecules – A Level Biology~~

Cohesion is the term used to describe water molecules 'sticking' together by hydrogen bonds. Due to water molecules sticking together, when water moves up the xylem in plants due to transpiration it is as a continuous column of

File Type PDF Level As Biology Molecules And Cells 2 Genetic

water. This is advantageous as it is easier to draw up a column rather than individual molecules.

~~Water – A Level Biology AQA Revision – Study Rocket~~

The first step of glucose metabolism in human body is the entry of glucose molecules into the cells. Once inside the cytoplasm, glucose molecules can undergo oxidation to yield energy or they can be stored in the form of glycogen. Entry into the cell. Glucose molecules are large and thus, cannot cross the plasma membrane freely.
