## Principles Of

The general principle of seismic reflection is to send elastic waves (using an energy source such as dynamite explosion or Vibroseis) into the Earth, where each layer within the Earth reflects a portion of the wave's energy back and allows the rest to refract through.

Principles of Seismology is targeted for upper-level undergraduate and beginning graduate students in seismology. It is quite good as an intermediate-level theoretical seismology text, and it may also serve as a general reference book for seismologists.
