Most children fall into five basic personality types that stem from inborn physical characteristics: the sensitive child, the self-absorbed child, the defiant child, the inattentive child, and the active/aggressive child. Stanley Greenspan, M.D., is the first to show parents how to match their parenting to the challenges of their particular child. He identifies and vividly describes these five universal temperaments and then, with great empathy, shows parents how each of these children actually experiences the world and how to use daily

enormous emotional challenges these children are facing. In witty, vivid stories, Dr. Greenspan brings to life the major emotional milestones of these years, when children move from the shelter of the family to the harsh rivalries of "playground politics," and toward an independent self image. His empathy for the turmoil children bring home from school, and for the parents who try to help, is deep and reassuring.

Every parent wants to raise a bright, happy, and moral child, but until Stanley Greenspan investigated the building blocks of cognitive, social, emotional, and moral development, no one could show parents how and when these qualities begin. In this book

Dr. Greenspan, the internationally admired child psychiatrist, identifies the six key experiences that enable children to reach their full potential. In *Building Healthy Minds*, he draws upon discoveries made in his research and practice as he describes the many ways in which games, fantasy play, and conversations with and without words encourage this development. No one has looked so deeply into the very earliest stages of human development, and no other book makes such vital and effective information available to every parent.

approach describes how to find the missing developmental steps that cause these symptoms. The best solution to the problem comes from knowing what essential skills to strengthen. Using the metaphor of a tree, Dr. Stanley Greenspan explains that the roots represent how children take in the world through what they hear, see, smell, and touch. The trunk represents thinking skills through which children grow both academically and socially. From these, the branches-children's basic abilities to read, write, do math, and organize their work-develop. Both parents and early learning professionals will especially welcome the sections on finding and solving learning

problems early. With Dr. Greenspan's characteristic wise optimism, this book "raises the ceiling" for all children who learn differently or with difficulty.
