June 10, 2020. Many banks in Europe face insolvency. If we want to recapitalize them, this will likely cost us more than 5% of GDP – and there are even worse side effects of another round of bank bailouts. Bailout is originally a maritime term that means removing water from a sinking ship. And as with today's banking system, a bailout sometimes is not enough to make a vessel float again.

The End of Banking goes further than these models by creating a framework that would effectively remove the distinction between shadow banking and the formal financial sector and would curtail balance sheet acrobatics to avoid regulation. Separating credit and money through trading algorithms and peer-to-peer technology is elegant, and re-intermediating banking services with a newly emerging set of custodians that would replace the existing system of credit provision and market liquidity is ...
