This book presents a number of topics related to surfaces, such as Euclidean, spherical and hyperbolic geometry, the fundamental group, universal covering surfaces, Riemannian manifolds, the Gauss-Bonnet Theorem, and the Riemann mapping theorem. The main idea is to get to some interesting mathematics without too much formality. The book also includes some material only tangentially related to surfaces, such as the Cauchy Rigidity Theorem, the Dehn Dissection Theorem, and the Banach-Tarski Theorem. The goal of the book is to present a tapestry of ideas from various areas of mathematics in a clear and rigorous yet informal and friendly way. Prerequisites include undergraduate courses in real analysis and in linear algebra, and some knowledge of complex analysis.

Japan is an inspiration in the personal growth and development field.

Kintsugi is the ancient Japanese art of repairing broken pottery with powdered gold. Day after day, week after week, stage by stage, the object is cleaned, groomed, treated, healed, and finally enhanced. Nowadays it has also become a well-known therapy metaphor to resilience. This practical book will help you overcome rough times, heal your deepest wounds, and become whole again through the numerous stages, writing exercises, and testimonies.

Emotions: from brain research to computer game development / Robert Trappl / - A theory of emotion, its functions, and its adaptive value / Edmund T. Rolls / - How many separately evolved emotional beasts live within us? / Aaron Sloman / - Designing emotions for activity selection in autonomous agents / Lola D. Cañamero / - Emotions : meaningful mappings between the individual and its world / Kirstie L. Bellman / - On making believable emotional agents believable / Andrew Ortony / - What does it mean for a computer to "have" emotions? / Rosalind W. Picard / - The role of elegance in emotion and personality : reasoning for believable agents / Clark Elliott / - The role of emotions in a tractable architecture for situated cognizers / Paolo Petta / - The Wolfgang system : a role of "emotions" to bias

Mapping class groups and moduli spaces of Riemann surfaces were the topics of the Graduate Summer School at the 2011 IAS/Park City Mathematics Institute. This book presents the nine different lecture series comprising the summer school, covering a selection of topics of current interest. The introductory courses treat mapping class groups and Teichmüller theory. The more advanced courses cover intersection theory on moduli spaces, the dynamics of polygonal billiards and moduli spaces, the stable cohomology of mapping class groups, the structure of Torelli groups, and arithmetic mapping class groups. The courses consist of a set of intensive short lectures offered by leaders in the field, designed to introduce students to exciting, current research in mathematics. These lectures do not duplicate standard courses available elsewhere. The book should be a valuable resource for graduate students and researchers interested in the topology, geometry and dynamics of moduli spaces of Riemann surfaces and related topics. Titles in this series are co-published

The Germanic language family ranges from national languages with standardized varieties, including German, Dutch and Danish, to minority languages with relatively few speakers, such as Frisian, Yiddish and Pennsylvania German. Written by internationally renowned experts of Germanic linguistics, this Handbook provides a detailed overview and analysis of the structure of modern Germanic languages and dialects. Organized thematically, it addresses key topics in the phonology, morphology, syntax, and semantics of standard and nonstandard varieties of Germanic languages from a comparative perspective. It also includes chapters on second language acquisition, heritage and minority languages, pidgins, and urban vernaculars. The first comprehensive survey of this vast topic, the Handbook is a vital resource for students and researchers investigating the Germanic family of languages and dialects.
